## Scalability

UPM™ is scalable depending on project size, complexity and the selection of the Project Type and its next phase(s) of the project.

Project Type is first selected in the Project Determination step during which it is assessed at each subsequent gate. The table below contains Guidelines to help you decide if your project is "small/simple", "medium/complex" or "large/complex". See the following table for definitions of the Guidelines then choose the type (size) of your project. After deciding, click a column heading.

The values given in the table above are for illustration purposes only. Each company may input its own limits.
This assures organizations that their project managers will get expert guidance from the world’s de facto industry standard. All the steps from PMI’s PMBOK® Guide are included in the UPMM™ PMBOK® Project Type and organized by the process groups of Initiating, Planning, Executing, Monitoring and Controlling, and Closing, to seamlessly and intuitively make them available to project managers.
Include your own processes and documents. Add multiple project life cycle templates. Manage multiple business units. Create your own flexible methodology. Use UPMM tools or others.
