

Generative AI for Project Management: An Instructor-Led Course

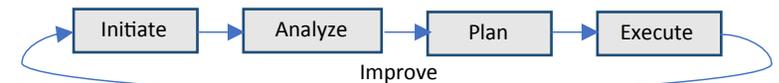

This course is ideal for project managers, or anyone curious about integrating AI into their day-to-day workflows. Master practical skills needed to harness the power of Large Language Models throughout the project lifecycle.

In the era of AI, build confidence in interacting with industry leading Generative AI Models with ready-to-use Prompt Repositories and Cheat Sheets.

Learn from a human, not another AI generated self-help training. Have fun sharing & networking with your cohort!

Value Proposition

- 35%**  Ditch theoretical lectures! You will first work directly with Foundational AI tools (ChatGPT, Gemini, Copilot). Then, get a sneak peek at Custom GPT's & chat with your own data!
- 25%**  Learn how to create prompts that engage Generative AI effectively. From project origination documents to planning to execution prompts, master the art of interaction.
- 25%**  Utilize case study based real-world examples to brainstorm ideas, analyze project performance, assess risks, explore options, optimize outputs and make informed decisions.
- 15%**  As AI becomes integral to organizational productivity, ethical considerations are paramount. Learn how to establish responsible AI practices within your projects while promoting innovation, flexibility and long-term value.
